

Consecuencias y preocupaciones tras la adopción de Internet2 en Texas A&M: Estudio de disertación.

Noemi V. Mendoza Diaz

Marco Teorico

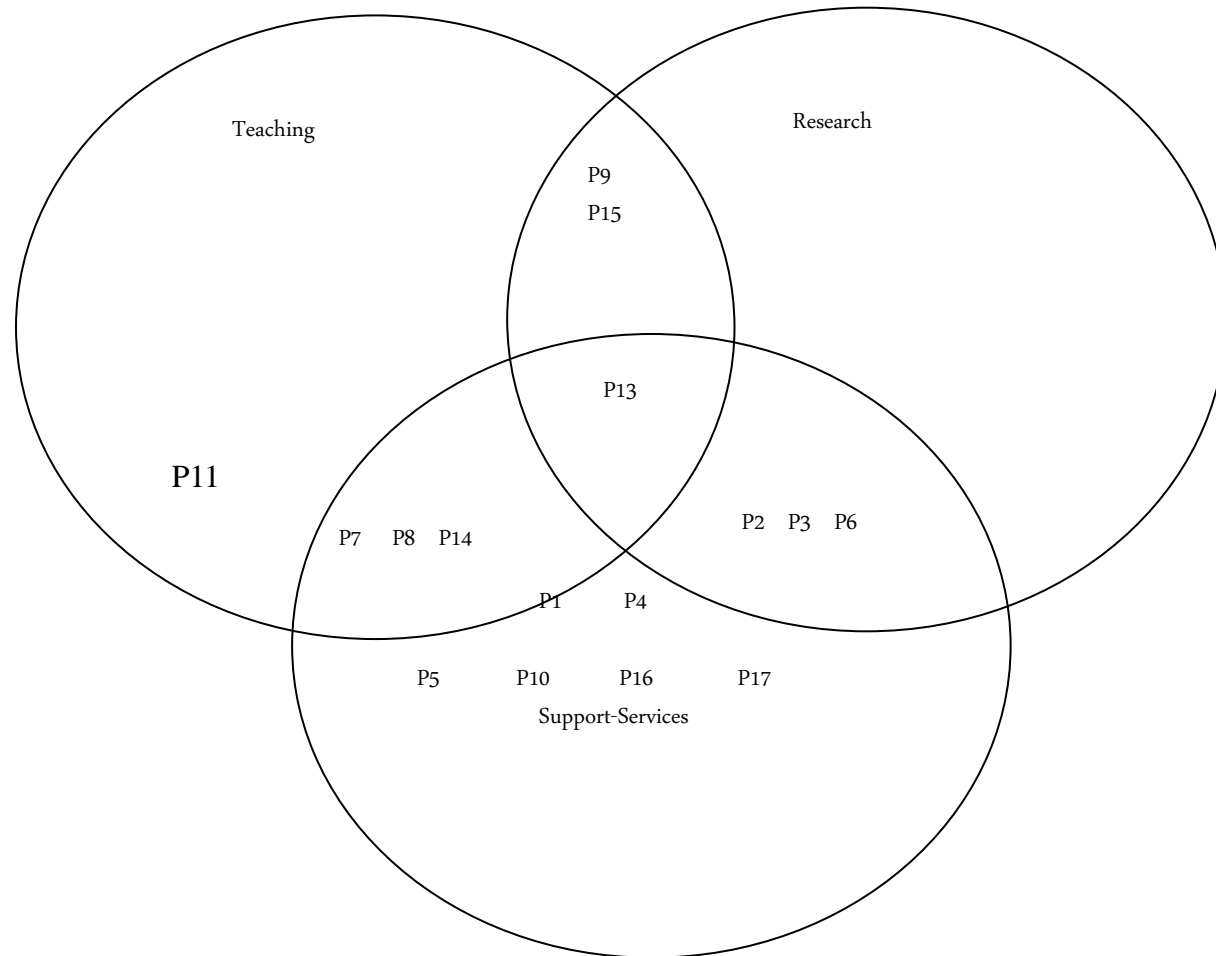

- **Roger's Diffusion of Innovations. Consequences (Desired vs. Undesired, Direct versus Indirect, Anticipated versus Unanticipated).**
- **Concerns Based Adoption Model (Stages: Awareness, Informational, Personal, Management, Consequence, Collaboration, Refocusing)**

Preguntas de Investigacion

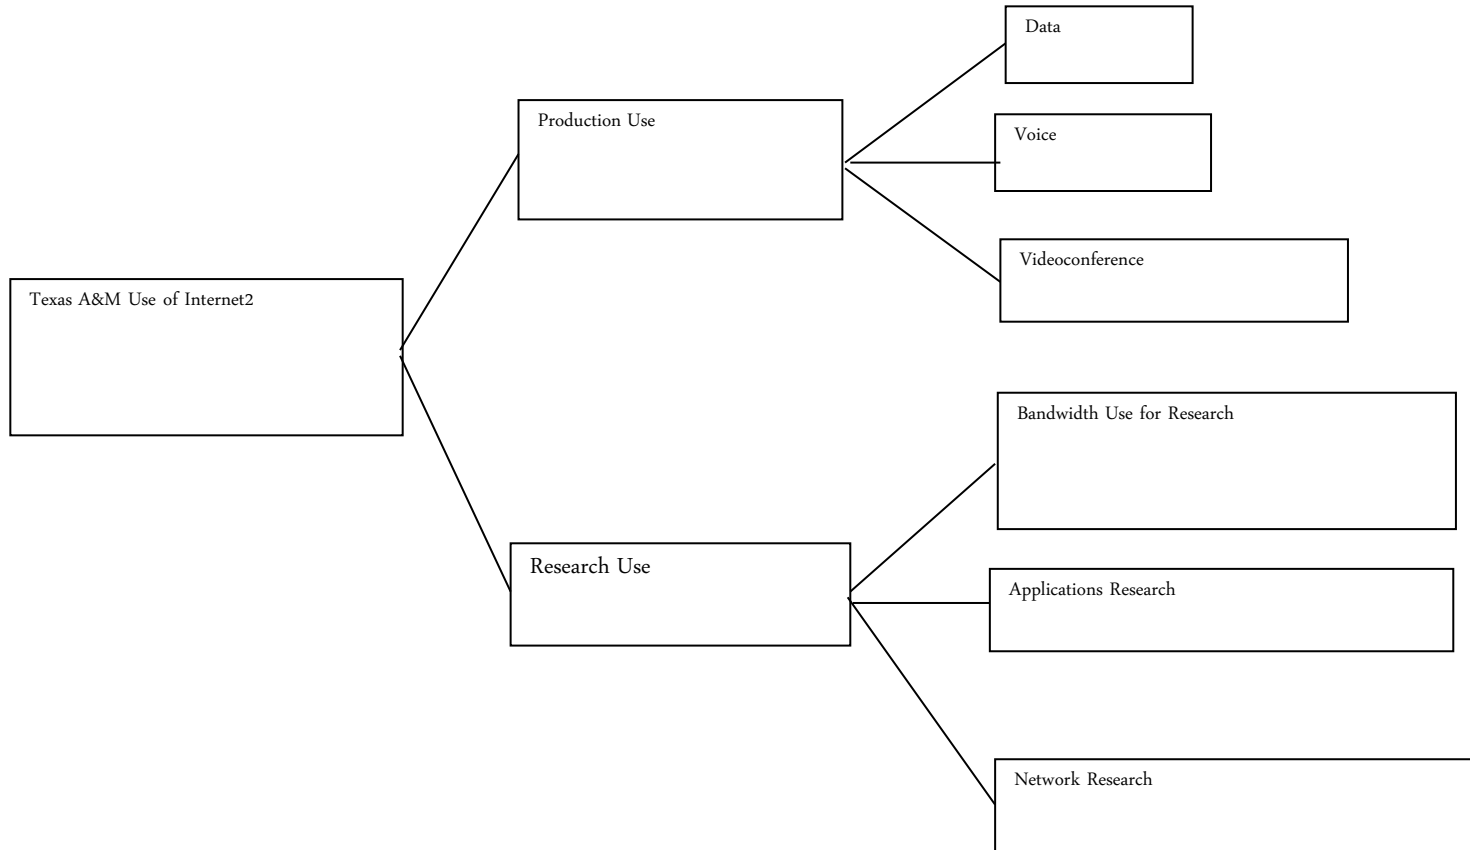

1. Cuales fueron las consecuencias de la difusion de Internet2 en TAMU?
2. Cuales fueron las preocupaciones?
3. Como puede TAMU mejorar el desarrollo profesional y las intervenciones para la difusion?
4. Hasta que punto los hallazgos son congruentes con los modelos de Rogers y Hall & Hord?

Participantes

Tema 1

Uso de I2 en TAMU

Tema 2

El dilema de compartir

- “Ahh, because it is so transparent to applications, a lot of people don’t know it’s there.”
- “I really wish we had more Internet2 research, more faculty members interested in identifying and participating in research of Internet2. It’s been very difficult finding collaborators for a number of ideas that I’ve had...”
- “It’s just too amorphous; I don’t know where the first generation ends and the second starts. I’ve never seen anything offered to us as a different service or different resource. We are busy enough utilizing the current Internet and I never went beyond. I feel unaware and I wonder if there’s more to it and I am just unaware. Is it my responsibility to find them? Or A&M’s?”

Tema 3

La influencia de I2

- “The streaming things are really making a big difference (Camtasia or the like). Certainly in some ways these changes are attributable to Internet2 because 5 years ago you could do those apps over Internet2 and you couldn’t do those kinds of things over the commodity Internet. I think certainly some of the experimentation and things were done and now they are able to transition to the regular Internet.”

Tema 4

Discusiones dentro de I2

National LambdaRail and Internet2.

- Participants 10 and 17 informed me that the Next Generation of Abilene capitalized a lot of the National LambdaRail contributions, and that was the great motive of discordance.

Tema 5

Preocupaciones

- **Political concerns**
 - I dislike the level of politics and bureaucracy in Internet2.
- **and Concerns for the future of Internet2**
 - We have Internet2 now but what's next? We don't have a clear direction.

Hallazgos

- The consequences and concerns of the adoption of Internet2 at Texas A&M resulted to be quite close to Rogers' (2003) model and Hall and Hord's (1987) model.
- The interviewees also suggested recommendations in the area of better promotion of Internet2, mostly targeting researchers.
